|----------------|-------------------------------------------------------------------------|
| Code           | 49-WCHW                                                                 |
| Description    | Large portable wheel chock                                              |
| Material       | Heavy-duty recycled rubber chock with yellow powder-coated steel handle |
| Typical Uses   | Large vehicle in industrial settings                                    |
| Configurations | Left- or right-mounted handle (49-WCHW-L or 49-WCHW-R)                  |
| Handle Height  | 885 mm                                                                  |
| Chock Size     | 300 x 320 x 260mm (LWH)                                                 |
| Chock Weight   | 12kg                                                                    |

## Key Features.

|                              |                                                                                            |
|------------------------------|--------------------------------------------------------------------------------------------|
| Integrated Handle and Wheels | Allows placement and removal of the chock without lifting, reducing strain and injury risk |
| High Visibility              | Yellow handle is visible from a distance and stands out in warehouse environments          |
| Dual-Sided Safety Signage    | Notifies drivers the wheel is chocked regardless of their approach direction               |
| Ergonomic Operation          | Chock tilts to engage wheels for transport, and rests flat for secure positioning          |
| Recycled Rubber Chock        | Same heavy-duty chock used in our standard large version, offering proven performance      |
| Tool-Free Use                | Supplied preassembled for immediate deployment                                             |
| Clear Visual Feedback        | Increases driver accountability and enhances safety checks                                 |
| Ideal for Frequent Use       | Especially suited for high-turnover logistics zones and loading docks                      |

## Overview.

Developed in response to warehouse and logistics teams needing a more ergonomic and visible wheel chocking solution, Vanguard's Wheel Chock with Handle and Wheels is designed to simplify and reinforce vehicle safety procedures.

Fitted with a hi-vis steel handle, built-in wheels, and double-sided signage, this wheel chock significantly improves operational efficiency and driver awareness in busy loading zones. Its design encourages more consistent use by reducing effort — ultimately increasing compliance and reducing risk. Supplied fully assembled and available in left- or right-handle configurations.
